DATASHEET

UP YOU GO

The self-locking retractable pulley block with reduction factor 4 - or 5 when used in the opposite direction - is the ideal solution for rescue operations. It has been specially developed to enable the safe lifting and lowering of injured persons or the tensioning of devices. The compact system is CE-marked, tested to 18 kN for 3 minutes and is even suitable for use in confined spaces. The self-locking function prevents the load from retracting after being pulled in, ensuring quick and easy operation. The pulley block consists of the UP ROLL and UP LOCK pulleys with ball-bearing pulleys, supplemented by a patent-pending rope guide that keeps the ropes parallel and reduces twisting. Thanks to the Freelock system, the cam can be unlocked or locked with just one hand movement, even when wearing gloves. The scope of delivery includes two OVX TG oval carabiners with triplex screw link and anti-rotation system as well as an 8 mm lanyard in accordance with EN 564. For transportation, the system is stowed in a resealable case with minimal packing dimensions and a drawstring opening for quick deployment.
