DATASHEET

KALDOMAT

The KALDOMAT roof vent is designed for venting roof structures (cold roofs) and for drying out soaked warm roof structures in connection with insulation and drying-out systems (warm roofs). The cold roof vent is made of impact-resistant plastic (polypropylene), has a diameter of 168 mm and a venting cross-section 200 cm². Heights of 320 and 430 mm are available, depending on the roof structure. Due to the easy to install and remove hood (bayonet lock), installations and inspections are possible without much effort. The installation is carried out according to flat roof guidelines and installation instructions.

- roof vent with ventilation cross-section 200 cm²
- 50% fewer fans and roof penetrations
- Hood with bayonet catch
